

* CSS: CSS is the language we use to style an HTML document.

- ↳ CSS describe how HTML element should be displayed.
- ↳ CSS stands for "cascading style sheets"
- ↳ CSS is used to define style for your web pages including the design and layouts.

* Types of CSS: →

- ① Inline CSS
- ② External CSS
- ③ Internal CSS

(1) Inline CSS: CSS is written directly within the HTML element using the style attribute.

Ex -

`<P style="color: red"> Web Technology. </P>`

(2) External CSS: CSS is written in a separate .css file and linked to the HTML document using the `<link>` tag

Ex - `<link rel="stylesheet" href="styles.css">`

(3) Internal CSS: CSS is written within the `<style>` tag section of an HTML

Ex - `<style>`
`{`
`color: blue;`
`}`
`</style>`

* Advantage of CSS:

- CSS Saves Time
- Page load faster
- Easy maintainany
- Reusability

* Selector in CSS:

- (1) Simple Selector: based on Name
- (2) Combination " " : based on specific relationship b/w them
- (3) Class Selector: It is specific class attributes to select the element with the specific class, class selector is preceded with dot (.)
- (4) ID Selector: Start with (#)

* CSS Comments: Comments are used to explain your code and may help you when you edit the source code at a later date.

A command will be ignored by Browser.

- * Types →
- single line
 - multi-line

h1, h2, p {

color: red;
text-align: center;

}

Output

Think Smart
Write Sharp
This is paragraph

* Dimension in CSS:

Property	Dimension
① Height	sets the height of an element
② Max-Height	sets the maximum height of an element.
③ min-width	Sets the minimum width of an element
④ max-width	sets the maximum width of an element
⑤ min-height	sets the minimum height of an element.
⑥ width	Sets the width of an element

* CSS Layout:

- ① Static
- ② Relative
- ③ Fixed
- ④ Absolute
- ⑤ Sticky

Element are then positioned using the top, bottom, left and right properties.

- Position: static: - static positioned elements are not affected by the top, bottom, left and right properties.

- Position: fixed: An element with position: fixed, is which means it always stays in the same place even if the page is scrolled.

Color: red;

* Navigation Bar:

- Navigation bar helps users easily access different section on page.

Home News Contact

* Image Sprites:

- CSS Images sprites are a single image that combines multiple images used to reduce page loading time and bandwidth consumption.

• Why use

- Faster Page loading
- Reduced Bandwidth

• CSS Attribute Selectors:

- The [attribute] Selector is used to select elements with a specified attribute

For ex - `img[alt = 'image'] {
border: 2px solid green;
}`

`<img src = " " alt = "image" >`

• Page Layout and site design:

- A header (with a logo and a navigation bar)
- A main sector (with an article and a sidebar)
- A footer.
